

# These are the hands that helped to build America.

HERE AT PRECISION, WE MANUFACTURE AND SELL THE ABRASIVES THOSE HANDS USE!

## UNITIZED WHEELS

Unitized Wheels are used for deburring and general-purpose cleaning. Burs, rust, discoloration and minor pits and scratches can be eliminated using this product. These are non-directional wheels that are used primarily for finishing operations in narrow and hard to reach places.

Precision Abrasives unitized material is made of layers of non-woven abrasive material impregnated with resin and compressed to form a sheet. It is designed to offer the very best finishing structure with very high tear resistance and long performance life.

**PRECISION**  
**ABRASIVES** Quality Abrasives  
for Precision Work

# UNITIZED WHEELS

## FEATURES & BENEFITS

- The product generates very little heat in operation
- It does not load up while running
- Requires light pressure for fine consistent finishing and polishing with excellent life
- Has a very high tear resistance if used on edges or on sharp parts
- Provides clean, bright surface on all metal parts including stainless steel

## APPLICATIONS

Deburring, cleaning, blending, finishing and polishing of a wide range of parts from any kind of steel, wood, plastic and composites.

## PRODUCT RANGE

### HARD DENSITY

#### 8A COARSE

- heavy deburring
- reducing sharp edges
- blending heavy marks or scratches
- cleaning scale or oxidation

### MEDIUM DENSITY

#### 6A MEDIUM

- light deburring
- blending marks or scratches
- cleaning scales or oxidation

### SOFT DENSITY

#### 3S FINE

- polish mechanical parts and smoothing edges
- cleaning rust, discoloration, coatings
- blending marks or scratches
